DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species C, as depicted by Figures 10-12 in Paper No. 5 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4, 5, and 7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Buschei (The Figure; page 1, lines 100-102; page 2, lines 98-110).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Buschei taken together with any one of Darby et al, Popov and Bloch.

Buschei (The Figure; page 1, lines 100-102; page 2, lines 98-110) substantially discloses applicant's invention as recited by instant claim 6, except for the gas passage gradually decreasing in sectional area toward the supply port thereof.

Art Unit: 1724

Darby et al (231 in the Figure), Popov (15 in Figure 1), and Bloch (31 in Figure 3) each alternatively disclose gas/liquid mixing apparatus wherein the gas passage gradually decreases in sectional area toward the supply port thereof in order that the gas flow through the apparatus will slow and become more uniformly pressurized across the sectional area of the flow passage. It would have been obvious for an artisan at the time of the invention, to modify the gas passage A' of Buschei to gradually decrease toward the supply port thereof, in view of any one of the alternative secondary references, since such would smooth the gas flow velocity and pressure profile through the apparatus by allowing the feed gas stream to smoothly expand toward the point at which the phases come into contact.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Bushey whose telephone number is (703) 308-3581. The examiner can normally be reached on Monday-Thursday 6:30AM-5:00PM.
